

# Repeat length

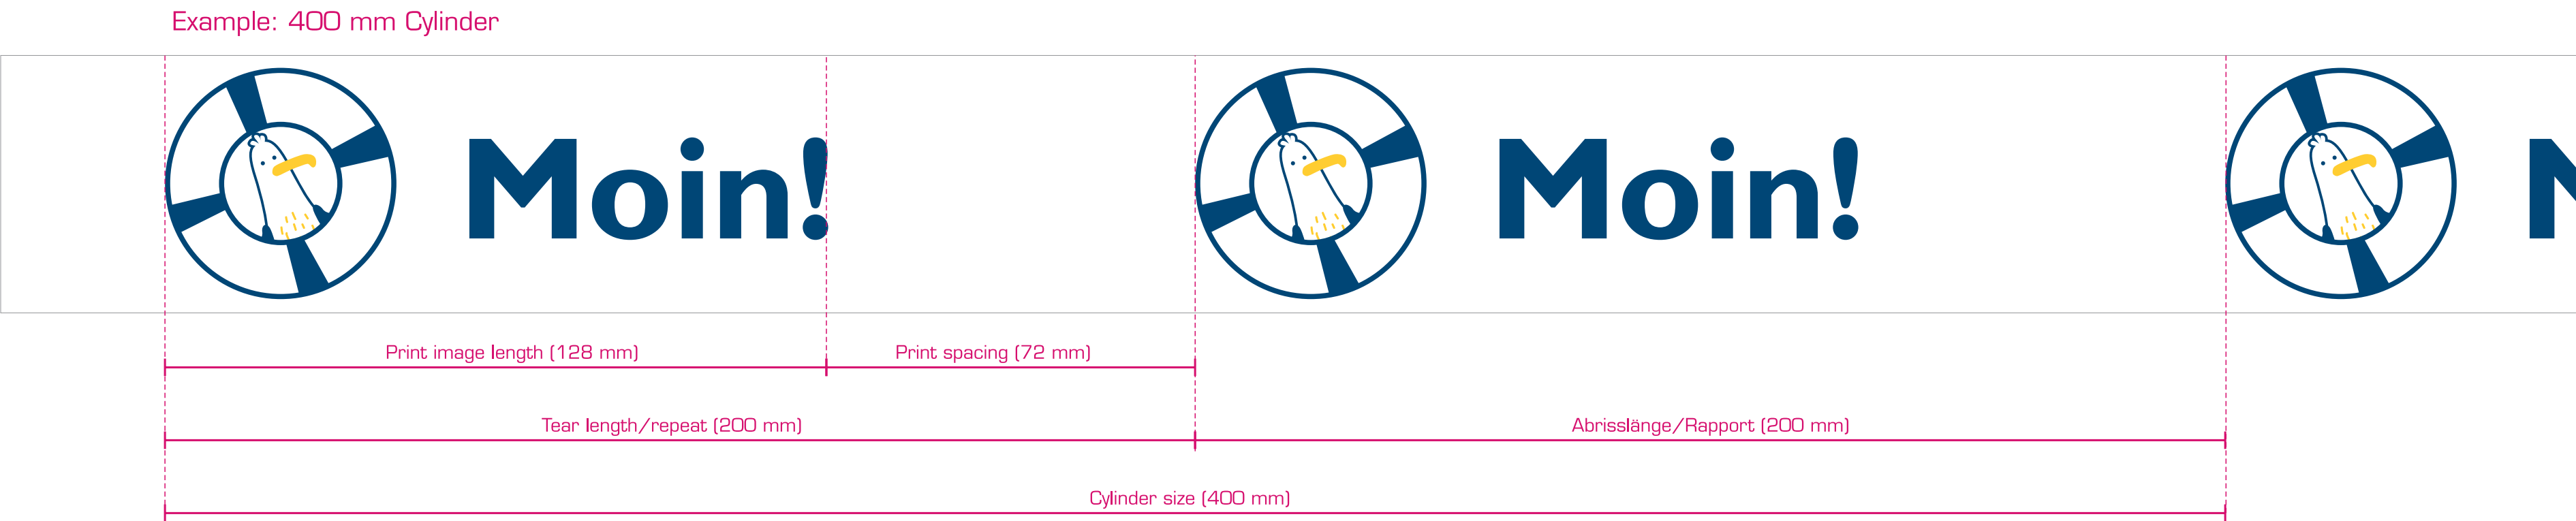

## Repeat length

Your print file does not need to be created to an exact measurement. We will determine the most suitable repeat length for your design and adjust it to match our cylinder sizes. The result will be visible in the galley proof.

The repetition of the print image depends on the cylinder size, and can also consist of equal subsets of a cylinder size.

|                                               |                                                                                      |
|-----------------------------------------------|--------------------------------------------------------------------------------------|
| <i>Print image length</i>                     | The length of the complete logo/text (excluding the spacing to the next print image) |
| <i>Print spacing</i>                          | The distance/space between two print images                                          |
| <i>Tear length/repeat</i>                     | The distance from the beginning of one print image to the beginning of the next      |
| <i>Circumference of the printing cylinder</i> | After one rotation, the print repeats                                                |

## Customer request, Provided data

The repetition of the print image depends on the cylinder size. Common cylinder sizes include: 200 mm, 220 mm, 250 mm, 280 mm, 300 mm, 330 mm, 360 mm, 400 mm, 450 mm, 500 mm.
